

Cutting-Edge Biotech Firm Develops Longevity Clinics.

Socobom works at the cutting edge of new developments in the healthcare sector. The company specializes in the biotechnological research and pharmaceutical development, production and distribution .

CEO Germain Demeulemeester explains, “Socobom’s research and development are carried out by our open-source innovation networks and in direct collaboration with the molecular neurobiology laboratories of the Catholic University of Leuven/Kortrijk, Belgium.μ

Our research focuses on mitochondrial free-radical membrane hypothesis and its connection to, and possible application in, anti-aging and longevity.”

Socobom also operates a production facility in Switzerland.

Current projects for Socobom include an innovative concept for longevity clinics associated with luxury resorts. Demeulemeester says, “Our vision and mission is th think outside the box to bring innovative approaches to consumers. We focus on research-based, sustainable and profitable business growth for a healthy and long-living society. Socobom is transferring Silicon Valley’s energy and innovative approach to Flanders”

Socobom is developing a “health facebook” as well as wearable health and wellness monitoring devices, molecular detection platforms and electronic-cell interfaces . Socobom is also looking forward to the outcomes of the Flanders region’s NERF project (www.nerf.be), which should allow the company to develop new medical applications.

Socobom welcomes the chance to work with American partnees, and its private investment fund, high-tech devices , longevity clinic and other projects offer significant investment potential.

Demeulemeester concludes, “The sky is the limit for Socobom”
